2001 Radical Prosport, red #55.

Just installed new "built" motor; '01 GSXR. Took it out for a few shakedown laps and it is running very, very strong! Very, very low hours!

Has rear diffuser, comes with two wings (1 full body width, 1 bi-plane, with mounts), 2 different sets of dive planes.

Extras include 3 sets of wheels, 1 set rains mounted, 2 sets slicks mounted, asst sprockets (front and rear), asst springs, complete extra brakes, extra body parts (1 nose and 1 side pod), 2 extra motors 1 stock GSXR and one needs freshening.

Steering rack recently rebuilt, differential recently rebuilt.

Carbon fibre seat.

New Hans Freindly belts installed spring 2011.

newer fuel cell (I believe 11 gallons).

new programmable 7 LED shift light installed July 2011.

New brake pads installed August 2011.

New battery installed August 2011

Koni dual adjustable.

Includes jack.

Car is roomy, comfortable, easy to drive, and a freakin' blast, great beginner car for someone just starting in DSR.

Asking \$19,900 car is located in Livonia Michigan.

The car and all spares are currently in my trailer so delivery within reasonable distance is not out of the question.
